Friends of Apache NetBeans

Apache NetBeans 27 packages

Apache NetBeans packages / installers provided by Friends of Apache NetBeans (see [who we are](#)). These packages are built with NBPackage using the official Apache NetBeans binary zip release. The packages themselves are not released by the Apache Software Foundation.

These installers include a local Java 24 JDK for the IDE to run on, offering a self-contained out-of-the-box experience. Additional JDK's for projects may be registered and/or downloaded using [Tools / Java Platforms](#) in the IDE menu, supporting development of projects from Java 8 up.

These packages are provided without warranty, and under the licenses and terms of the bundled software. Please make sure you're familiar with all terms before downloading. Apache NetBeans is provided under the terms of the [Apache Software License](#). All of these packages include [Azul's Zulu](#) build of OpenJDK - see [Zulu release notes](#).

Support

For issues with the installers / packages themselves, please [raise an issue](#) on our GitHub repository.

For community support with the IDE itself, please use the [Apache NetBeans mailing lists](#).

Select Destination Location

Where should Apache NetBeans be installed?

Setup will install Apache NetBeans into the following folder.

To continue, click Next. If you would like to select a different folder, click Browse.

C:\Program Files\Apache NetBeans

Browse...

At least 1,33 GB of free disk space is required.

Next

Cancel

Select Additional Tasks

Which additional tasks should be performed?

Select the additional tasks you would like Setup to perform while installing Apache NetBeans, then click Next.

Additional shortcuts:

☒ Create a desktop shortcut

Apache NetBeans IDE 27

Ejercicio 2. Ahora vamos a configurar el “Look and Feel” de tu editor de código. Nos servirá para adaptarlo a nuestras necesidades visuales.

Download the latest latest release.

Activating theme

1. Start Netbeans
2. Navigate to theme import dialog: `Tools > Options > Fonts & Colors > Import...`
3. Click `Browse...` and select the .zip file downloaded from the release page and then click `Ok`
4. Ensure `All` option is checked and then click `Ok`

3   */
4
5   package com.mycompany.mavenproject1;
6
7   /**
8    *
9    * @author CICLOT
10   */
11   public class Mavenproject1 {
12
13       public static void main(String[] args) {
14           System.out.println("Hello World!");
15       }
16   }
17
```

Ejercicio 3. Debes hacer una captura de pantalla con el resultado de la ejecución del programa de ejemplo que encontraréis al final de los apuntes de la Unidad 2. El archivo creado se deberá llamar Ejercicio3.java.

Ejercicio 4. - Para la siguiente actividad, debéis crear un proyecto nuevo con el nombre "Ejercicio4" y meterle el sencillo código que os adjunto a continuación (copiar pegar).

```
import java.util.Scanner;

public class Ejercicio4 {

    public static void main(String[] args) {

        Scanner teclado = new Scanner(System.in);

        // Aquí empieza nuestro código

        int edad;

        System.out.println("Hola, bienvenido a mi programa de prueba");

        System.out.println("(pulsa ENTER para continuar)");

        teclado.nextLine();

        System.out.println("Dime cuál es tu edad (puedes mentirme, si quieres)");

        edad = teclado.nextInt();

        teclado.nextLine();

        if(edad < 18)

            System.out.println("Acceso denegado, eres menor de edad");

        else

            System.out.println("Felicidades, eres mayor de edad!"); }}

```
